

# Bio-Metrica announces the release of the MBU-BT for remote biometric time and attendance

***Bio-Metrica's 'Mobile Biometric Unit with BioTime' (MBU-BT) allows remote time and attendance data collection***

Orlando, FL April 12, 2011 – First tier manufacturer, system integrator and software developer Bio-Metrica, LLC is proud to announce the release of its MBU-BT for use in time and attendance data collection at remote sites.

Bio-Metrica's MBU-BT is a ruggedized biometric time and attendance mobile unit that can be configured to operate in a variety of harsh environments. The MBU-BT can also be outfitted with an internal battery that can function for up to 10 hours, allowing operators to collect data in areas where power may not be readily available. The MBU-BT uses Bio-Metrica's BioTime software, which is a robust biometric time and attendance suite of applications that can capture, analyze, and report time and attendance information across an enterprise. The MBU-BT can be configured as a standalone system or as a remote server as part of a larger BioTime system. In this case, an enterprise can use BioTime in a distributed configuration with the BioTime server in a centralized location, and a few remote servers either in a desktop or mobile configuration.

The MBU-BT is ideal for businesses that need to collect time and attendance data using both biometrics and RFID cards at remote locations. It also has the capabilities to enroll users remotely and sync all of its information when connected with BioTime back at the office or over a remote data link.

"With the MBU-BT, businesses can deploy an enterprise level time and attendance solution anywhere it's needed without having to compromise on features. With the modular setup of the MBU-BT, we can configure it to fulfill our clients' needs," said Ronen Yacobi, CEO of Bio-Metrica, LLC.

## **About Bio-Metrica, LLC:**

Headquartered in Altamonte Springs, Florida, USA, Bio-Metrica LLC is a first-tier manufacturer, system integrator and software developer with R&D center in the United States. Bio-Metrica provides turnkey and custom biometric identification solutions to government, law enforcement, and enterprises worldwide. Founded by electrical engineers and equipped with the most up to date know-how in the biometric field, Bio-Metrica is committed to bringing cutting edge biometric solutions all of its clients.
